#### Introduction

Insider threat behavioral analytics

Typically involves analyzing data on the behaviors of subject insiders to identify indicators of increased risk

What about *organizational behaviors*? (i.e., non-security related practices)

- Can they be conducive to insider threat?
  - YES historically known as situational factors
  - BUT Little considered when forming insider threat programs
  - IMPLIES Insider attacks are repeated as natural consequence

You can prevent, detect, respond to conducive organizational behaviors

Just as with indicative insider behaviors

# A CERT Research Project

Determine influence of workforce management practices on insider threat behaviors

#### **Negative Incentives**

Workforce management practices that attempt to *force* employees to act in the interests of the organization

> **Employee Constraints, Monitoring, Punishment**

#### **Positive Incentives**

Workforce management practices that attempt to attract employees to act in the interests of the organization

Focus on Employee Strengths, Fair & Respectful Treatment

Negative incentives *alone* can *exacerbate* the threat they are intended to mitigate\* Basic Belief: Organizations should explicitly consider a mix of positive and negative incentives to build insider threat programs that are a net positive for employees **Initial Scope:** Disgruntlement-spurred threat

\* See "Effective Insider Threat Programs: Understanding and Avoiding Potential Pitfalls," SEI Digital Library, March 2015.

Balancing Organi9izational Incentives to Counter Insider Threa

# **Insider Threat Research Context** Prevent Insider

Prevent using **Positive** Incentives

Positive deterrence (monitoring not required)

Detect and Respond to At-Risk **Organizational Conditions** 

Detection of organizational conditions conducive to insider threat

Insider Threat Defense

> Detect and Respond to Insider Misbehavior

Misbehavior

Prevent using Negative **Incentives** 

A form of negative incentive Detect and Respond to At-Risk **Insider Behaviors** 

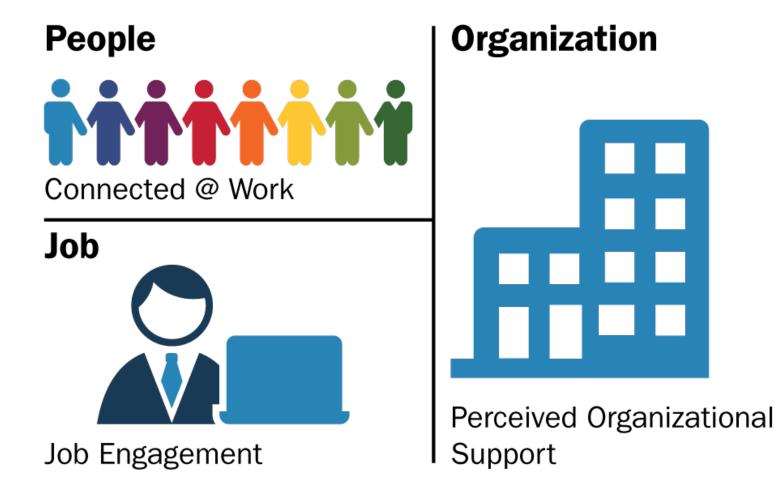

> Negative deterrence (monitoring not required)

Early detection with possible positive or negative response

# **Three Broad Categories of Positive Incentives**

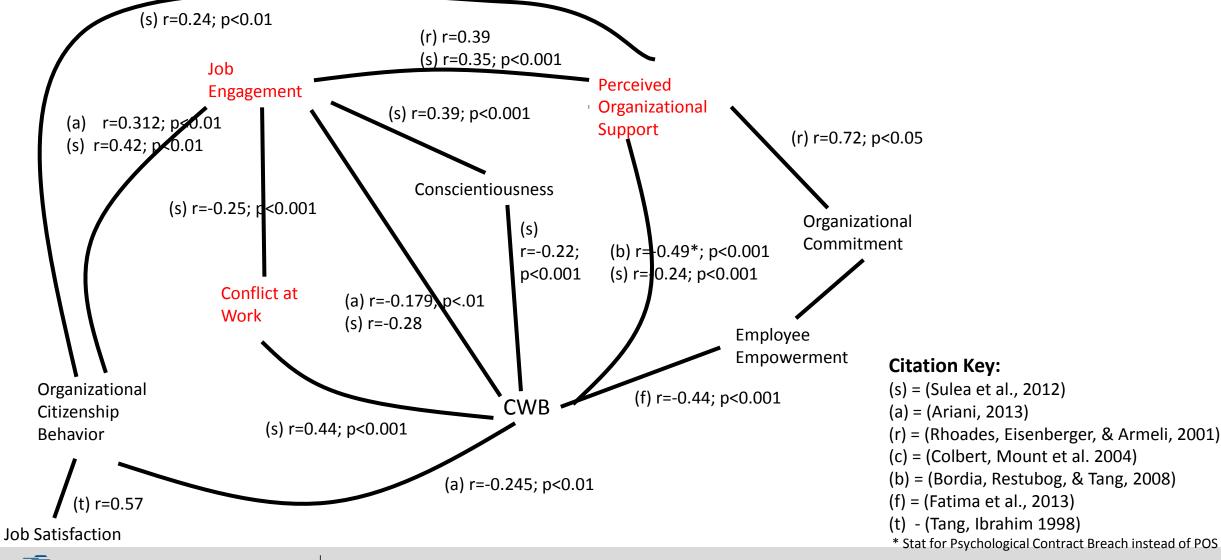

# Previous Studies in the Organizational Behavior Literature: Counterproductive Work Behavior (CWB)

# Two-Pronged Exploratory Research Approach\*

- 1. Insider Incident Case Study Analysis
  - How engaged, connected, and supported are insider threat actors?
- 2. Organizational Survey
  - How much does organizational support influence insider cyber misbehavior?

Extension of previous work by focusing on

- Cyber-related insider threat behaviors
- Organizations actively establishing insider threat programs

Balancing Organi9izational Incentives to Counter Insider Threa

<sup>\*</sup> For more details on this research see "The Critical Role of Positive Incentives in Reducing Insider Threat," SEI Technical Report CMU/SEI-2016-TR-014, December 2016. http://resources.sei.cmu.edu/asset\_files/TechnicalReport/2016\_005\_001\_484929.pdf

# **Organizational Survey**

How much does organizational support influence insider cyber misbehavior?

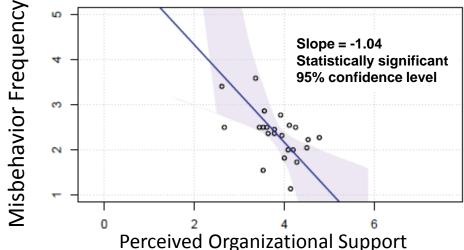

- Challenge: Hard-to-reach population suggests initial exploratory (non-random, small sample)
- Method: Survey Open Source Insider Threat (OSIT) Information Sharing Group
  - Independent variables on established 5-point scales
    - Perceived organizational support (36 questions)
    - Organizational justice (19 questions)
  - Dependent variable on 5-point frequency scale
    - Cyber misbehavior from case data (22 questions)

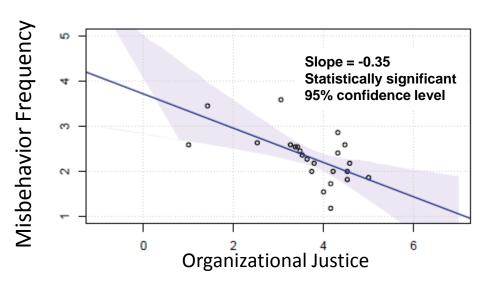

#### Response:

- 25 out of ~90 organizations responded

#### Results: 23 responses\*

<sup>\*</sup> Analysis used Deming Regression and Multiple Imputation by Chained Equations for missing values.

# Surveyed Items on Insider Cyber Misbehaviors (Intentional)

Violating acceptable use

Taking proprietary information upon departure

Violating security policy

Stole significant items

Logged in to appear as if working

Inappropriately transmitting proprietary information internally

Purposely producing low quality work

Unauthorized remote access

Inhibiting coworker progress

Disabling security controls

Posting negative perceptions about organization

Sabotaging coworkers work

Purposely damaging organizational equipment

Plagiarizing work of coworkers

Sending threatening or harmful emails

Purposely installing harmful software

Vandalizing website

### **Limitations and Directions**

#### **Insider Threat Incident Analysis**

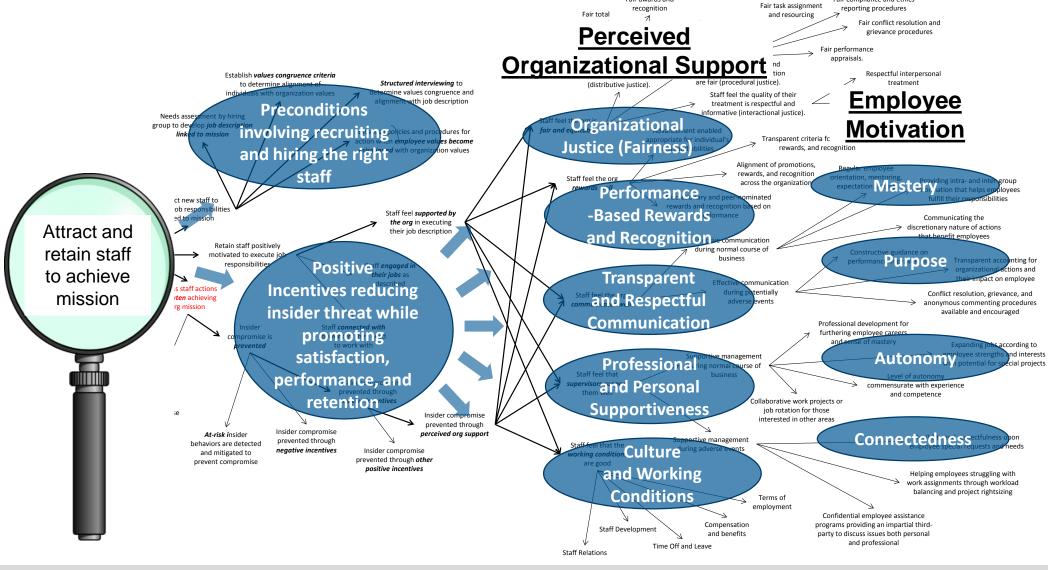

- Analysis of three incidents does not permit drawing strong conclusions
- Used to narrow hypothesis for survey work

#### Organizational Survey

- Challenges reaching population suggested non-random sample of OSIT
- Vulnerable to the self-selection bias
- Data does not support causal analysis and results not generalizable Our research just scratches the surface, BUT
- Justifies additional fundamental research in area (will discuss later)
- Combined with previous organizational behavior research, (arguably) justifies piloting of positive incentives (applied research)
  - Focus on practices associated with perceived organizational support

## Organizational Supportiveness Principles and Practice Areas

# Monitoring and Response (Examples)

Organizational Support Dimension	How to Reduce Incident Baseline (example)	What Organization Behavior to Monitor
Organizational Justice (Fairness)	Align compensation internally and externally	Consistency of compensation levels with organizational benchmarks
Performance-based Rewards and Recognition	Use performance-based criteria for promotions	Consistency of promotions with employee competency and performance track record
Transparent & Respectful Communication	Regular employee expectation setting	Level of employee complaints and grievances
Personal and Professional Supportiveness	Strengths-based professional development	Employee job engagement

#### **Areas of Research**

#### Theory Development

Experiment-based determination of cause-effect relationship between perceived organizational support and insider threat

#### Technology Development

- Detection of
  - at-risk organizational conditions associated with organizational support
  - insider alienation through indicative changes in insiders' network of workplace relationships
- HR tools can facilitate positive incentives (e.g., performance management)
  - BUT, Employee Relationship Management tool development needed to support analysis of and diagnostics for one-on-one relationship between manager and direct reports

Balancing Organi9izational Incentives to Counter Insider Threa

© 2018 Carnegie Mellon University

#### Adoption

- Determine how organizations can
  - determine an appropriate mix of positive and negative incentives
  - transition to that from their current state

# Ways of Working With Organizations (Now)

**Goal:** Identify specific recommendations on positive incentive-based workforce management practices with the goal of reducing insider threat

#### **Options:**

- Analyze existing data, practices, and/or incidents
- 2. Conduct surveys, interviews, or focus groups to better understand employee attitudes and behaviors
- Analyze tools that support employee relationship management
- Conduct a multi-phase assessment, training, and coaching study to determine outcomes associated with specific practices

### CMU Faculty Collaborator: Professor Denise Rousseau

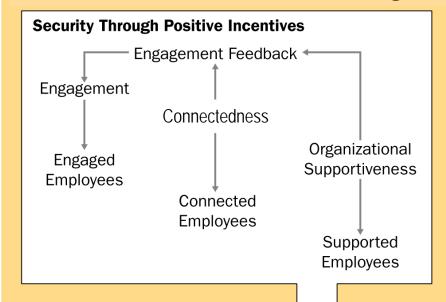

- Carnegie Mellon University Organizational Psychologist
- Founder of the theory of psychological contracts

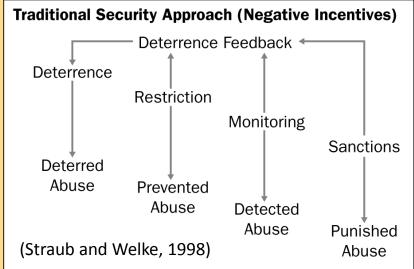

## Vision for Integrating Positive and Negative Incentives

#### **Balanced Defense: Extending the Traditional Security Paradigm**

- Fewer unintended consequences
- Satisfaction. performance, retention

- Fewer insider incidents and misbehaviors
- Lower investigative costs, productivity loss

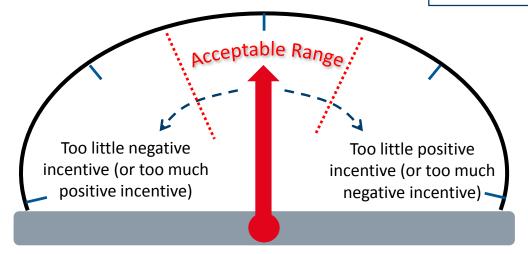

# **Conceptualizing a Metric for Balanced Defense**

The optimal ratio and acceptable range may vary depending on the specifics of the organization or the team in which it is applied

**Optimal Ratio:** Positive Incentive / Negative Incentive

Good starting place is to think about the negative incentives (security constraints, practices, and technologies) that you currently have in place

- Regulatory Focus Theory provides a basis for determining optimal ratio
- A basic principle is that more is not always better!

Balancing Organi9izational Incentives to Counter Insider Threat

# **Key Take-Aways**

Insider goodwill is important to both

- keeping intentional insider threat to a minimum
- AND ensuring organization success generally

Organizational practices that undermine insider goodwill exacerbate risk

- If not addressed, such practices allow attacks to recur as natural consequence
- Includes unintended consequences of existing cybersecurity practices

Positive incentive-based principles and practice areas can be used to

- Reduce the *baseline* insider incident frequency
- AND Target user and organizational behavior monitoring

Insider threat programs that balance positive and negative incentives can become an advocate for the workforce and a means to improve employee worklife

a welcome message to employees threatened by a focus on discovering insider wrongdoing
